

Bioinformatics Storyboard: Complete/Incomplete

Based on The Foundational Level report rubric

- **Formatting:**
 - ☐ a minimum of 3-4 slides per category below, and each slide has
 - ☐ a topic sentence at the top of the slide that summarizes the slide (**each slide** corresponds to **a paragraph** in a written text)
 - ☐ A mix of text in bullet points and visuals (diagrams, figures, tables, pictures, ...)
 - ☐ The visuals don't have to be high-quality, e.g., screenshots of preliminary Python figures, unformatted R tables, hand-drawn conceptual figures, picture of a whiteboard session ...
 - ☐ Include relevant references, in the Intro, Methods, and Discussion sections
 - ☐ **create a narrative or story of your project.** This will help you in making your poster and polished visuals, and after feedback from your poster presentation you can expand the storyboard (one slide per paragraph), and finally convert that into your final written report
- **Introduction:**
 - ☐ Provides a sufficient set-up and literature review that
 - ☐ leads to a knowledge gap,
 - ☐ the biological question/hypothesis,
 - ☐ how bioinformatics tools will solve this, and
 - ☐ provides a basic explanation of its importance and novelty.
- **Methods:**
 - ☐ Identifies the final datasets used, including source, size, and key characteristics.
 - ☐ Lists the primary programming language and appropriate libraries/packages/pipelines.
 - ☐ Provides a high-level description of the analyses (bioinformatics, statistics, biological, ...).
- **Results:**
 - ☐ Description of the data
 - ☐ Exploratory data analysis, quality control
 - ☐ Includes at least two primary deliverables (e.g., a data visualization and a summary table) that directly relate to the biological question/hypothesis.
- **Discussion:**
 - ☐ Summarizes the main findings of the research.
 - ☐ Discusses their importance in the field of research

All **checkboxes** need to be **checked** to **pass** this assignment. The most challenging part for this storyboard draft is creating the narrative for your project, and spending extra time on that aspect will pay off for creating your poster and final written report. Finally, since this is a draft, if some aspects are missing or preliminary or not polished, that is acceptable. Just include a placeholder for the missing or incomplete information.
